Dear Minister Wilkinson,

Start with a clear statement of purpose

I am an extremely concerned citizen writing to urge you to reject the Grassy Mountain Coal project and any other coal mines in Alberta's southern Rocky Mountains.

Alberta's southern Rocky Mountains are an iconic landscape which promote tourism, recreation, and biodiversity. This coal mine will result in significant carbon emissions, put our drinking water at risk, and seriously threaten Alberta's wildlife.

Keep it simple! You don't need to know all the facts!

Personalize your letter. Share your voice and concerns.

As a mother of two young kids, these coal mine projects are extremely concerning for the health of my family. I worry about how coal mines will threaten our drinking water and air quality. I love to take my family to the mountains for a day of hiking, but this experience would just not be the same if we were looking at coal mines, instead of mountains.

Talk about big picture impacts

Allowing the Grassy Mountain Coal project to proceed will drastically reduce tourism in the area and impact local business owners such as myself. It is clear that the risks associated with Grassy Mountain Coal Project far outweigh any possible economic benefits. This project should be rejected by the Federal and Provincial Governments and no other coal projects should be allowed to move forward in the region. Thank you for your time.

Be respectful

Sincerely,
Concerned Citizen!
