

Community Science

Birds

Lesson 4: How to take part in community science

Duration: 1 hour **Location:** Indoor/Outdoor – your choice!

Overview

In this lesson students will:

Find hidden QR codes (either indoors or outdoors) and scan the codes to reveal photos and videos of common species. Students will use the identification guides to identify the species to complete curriculum-linked questions. Students will then learn how to upload citizen science data to an app and discuss how this data can be used.

This session will prepare students for the upcoming practical citizen science sessions.

1

Learning objectives

By the end of the session, students will be able to:

- Discuss how trees affect, and are affected by, local species.
- Identify commonly found species based on observable characteristics.
- List ways that citizen science data can be used, and how this enables communities to participate in decision-making processes.

Curriculum links

Grade: 6

Science Topic E: Trees and Forests

- Describe kinds of plants and animals found living on, under and among trees; and identify how trees affect and are affected by those living things
- Study the complex interaction between trees and the larger environment

Social Studies 6.1 Citizens participating in decision making

- How can individuals, groups and associations within a community participate in the decision-making process regarding current events or issues?

Community Science

Birds

Lesson 4: How to take part in community science

Equipment required

- iPads/tablets (1 per group)
- QR codes to hide (either indoors or outdoors)
- Recording sheets and whiteboard pens (1 per group)
- Identification guides for common species

2

Additional information

The main portion of this session can be hosted indoors or outdoors. Before the class, hide the QR codes for students to find.

Community Science

Birds

Lesson 4: How to take part in community science

Lesson plan

Time	Activity	Equipment needed
Before lesson	Hide the 7 QR codes either indoors or outdoors.	<ul style="list-style-type: none">• QR codes
10 minutes	Explain to students that they will be practising citizen science skills today. Their task is to find the hidden QR codes and scan them to discover photos and videos of different species. They must look carefully at the animals and record what they see on their tracking sheet. Demonstrate how to scan the QR code and talk students through the example on the recording sheet.	<ul style="list-style-type: none">• Recording sheets for each group
30 minutes	<p>Split students into small groups, each group with an iPad/tablet, recording sheet and pen. Identification guides will need to be available and shared between the class. Each group must find a QR code and scan this to discover a photo or video of an animal. Looking closely at the markings on the bird, students will use the identification guides to identify the species. They can then complete the other information on the recording sheet. Students will repeat this activity until they have found all 7 bird species.</p> <p>Note: students may need assistance to identify species, and to think about how they affect, and are affected by, trees.</p> <p>To help facilitate group work, each team member could be assigned a task such as:</p> <ul style="list-style-type: none">• record keeper (to write notes)• species specialist (to identify species)• habitat specialist (to pick out the habitat shown on the photo or video)• detective (to find QR codes)• technology specialist (to scan QR codes)	<ul style="list-style-type: none">• iPads/tablets• Recording sheets and pens• Identification guides

Community Science

Birds

Lesson 4: How to take part in community science

	<p>Birds to find on QR codes:</p> <ol style="list-style-type: none">1. Mallard ducks2. Red winged blackbird3. Black-capped chickadee4. Canada goose with chicks5. Canada goose with chicks6. American Robin7. Pileated woodpecker <p>Note: the QR codes contain a range of species for students to identify. Some will be harder to identify than others; preparing students for the practical citizen science sessions.</p>	
10 minutes	<p>Prepare the PowerPoint presentation back in the classroom.</p> <p>Slides 2-6: Now that we have collected our data, we need to share this with scientists. But how?</p> <p>We use citizen science apps to share our findings. There are many to choose from, but we are going to focus on eBird. When we upload our photos, we have to add much of the same information that we collected in the session today. This tells scientists where the animal was and when!</p> <p>If you are unsure what species you have seen, you can still upload your sighting. All submissions are checked by others before the data is used by scientists! Watch the video to see how to use eBird. Start the video at 37 seconds. You can use eBird while on a citizen science walk, or collect the data and photos while outside, and submit your findings as a class later. We will cover this in a later session.</p>	• PowerPoint presentation

Community Science

Birds

Lesson 4: How to take part in community science

	<p>Slide 7: what is the data used for? The data we collect can be used for all sorts of things! Your data might be used by the public, by scientists, and the government!</p> <p>Citizen science:</p> <ul style="list-style-type: none">• Gives information to the government to make good decisions• Helps make rules and laws to protect animals• Helps make rules and laws to protect habitats <p>For example, we may find an endangered species in an area, which may be able to stop a building development in the area!</p>	
10 minutes	<p>Plenary</p> <p>Slide 8: discuss the following question: <i>How can people within a community participate in the decision-making process regarding current events or issues using citizen science?</i></p>	<ul style="list-style-type: none">• PowerPoint presentation
